The i-Milk Benefits

Introducing i-milk, the smartest milk dispenser on the market. i-milk's patented design and clever software combine to save you thousands of dollars and man hours. Instead of manually pouring milk you simply place a milk jug on the dispenser. i-milk recognises the size of the jug and fills it to the level you have pre-set.

i-milk is the most advanced milk dispensing system on the market. It uses weight based technology to deliver you the accuracy you have been searching for.

The barista has their hands full in such a busy and confined production area, so we came up with a solutions. **NO MORE BUTTONS!**

Simply place the appropriate jug down to detect your selection while you keep making coffee.
