

i-milk mini will speed up your service and unclutter your counter.

i-milk mini is a bench-top milk dispenser that will speed up your service during busy rush hours.

Using an i-milk mini is much quicker and easier than pouring milk from bottles.

Food safe

i-milk mini replaces domestic milk bottles and will enhance the professional look of your coffee station. Fabricated from food grade 304 stainless steel i-milk mini is based on HACCP principles.

Use your refrigeration

i-milk mini has an extensive range of milk storage options to fit almost any fridge or cool room. Pumps and delivery lines are installed in a non - invasive way so there is no need to buy specialist refrigeration.

Use your present milk supply. You can continue to use your preferred bottled milk or milk packaged in 10 litre bladders for greater efficiency and eliminate unnecessary plastic waste.

Simple to use

Place the jug to be filled under the font. Press the left button for Lite milk or the right button for Full Cream milk.

To stop the pour just release the button.

Where to locate

The recommended place for an i-milk mini is beside your coffee machine on the opposite side to the grinder. Turn over for the foot print.

i-milk mini is free standing so it can be moved if required.

Easy to plumb

Milk lines that connect to your refrigeration are plumbed through the service hole under your coffee machine. Or, if preferred vertically through your bench top.

Font finishes

i-milk mini is supplied with a brushed stainless steel font. However, other fonts such as industrial copper, polished brass, black or white are also available.

Warranty and models

i-milk mini is designed and manufactured in Australia and is covered by a 12 month warranty. If you look after it i-milk mini should go on filling your jugs for years.

There are 2 models to choose from:

Standard: dispenses 500ml in 10 seconds

Super: dispenses 500ml in 6 seconds
